

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0036. The time required to complete this information collection is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

OMB APPROVED
0579-0036
Exp.: 10/31/2018

This report is required by law (7 U.S.C. 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

2. HEADQUARTERS RESEARCH FACILITY (Name, address, and telephone number as registered with USDA, include ZIP Code)

NEW YORK BLOOD CENTER INC
310 EAST 67TH STREET

NEW YORK NEW YORK, NY 10065

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, teaching, or experimentation, or held for these purposes. Attach additional sheets, if necessary.)

FACILITY LOCATIONS (Sites)

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	F. TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

NEW YORK MEDICAL COLLEGE
DEPT OF COMPARATIVE MEDICINE
BASIC SCIENCE BUILDING
VALHALLA, NY 10595

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, teaching, or experimentation, or held for these purposes. Attach additional sheets, if necessary.)

FACILITY LOCATIONS (Sites)

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	F. TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	56	0	56
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	6	55	0	61
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	1	0	1
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

(b)(6), (b)(7)(c)

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0036. The time required to complete this information collection is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

OMB APPROVED
0579-0036
Exp.: 10/31/2018

This report is required by law (7 U.S.C. 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

NORTH SHORE-LONG ISLAND JEWISH HEALTH SYSTEM
THE FEINSTEIN INSTITUTE FOR MEDICAL RESEARCH
350 COMMUNITY DRIVE
MANHASSET, NY 11030

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, teaching, or experimentation, or held for these purposes. Attach additional sheets, if necessary.)

FACILITY LOCATIONS (Sites)

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	F. TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0

9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

- 1.) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2.) Each principal investigator has considered alternatives to painful procedures.
- 3.) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). **A summary of all such exceptions is attached to this annual report.** In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4.) The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

I certify that the above is true, correct, and complete (7 U.S.C. Section 2143).

DATE SIGNED _____

04-FEB-2015

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0036. The time required to complete this information collection is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

OMB APPROVED
0579-0036
Exp.: 10/31/2018

This report is required by law (7 U.S.C. 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	F. TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	19	561	3	21	585
5. Cats	0	29	4	0	33
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

11. Pigs	0	0	13	0	13
12. Other Farm Animals					
13. Other Animals	0	5	50	0	55

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21-R-0114

2. Number 10 of animals used in this study.

3. Species (common name) Rabbit of animals used in the study.

4. Explain the procedure producing pain and/or distress.

Animals are experimentally infected with *Exserohilum rostratum* or *Candida albicans* or *Candida parapsilosis* based on the approved experimental plan. Although animals are monitored closely for humane endpoints, some animals that appear clinically normal may have a rapid evolution of disease and be found dead.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Humane endpoints are used in all experiments as a criterion for euthanasia. Animals which die would not be expected to demonstrate humane endpoints necessitating euthanasia.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21-R-0114
2. Number 3 of animals used in this study.
3. Species (common name) Hamster of animals used in the study.
4. Explain the procedure producing pain and/or distress.

Animals are experimentally infected with *Leishmania donovani*. Although animals are monitored closely for humane endpoints, some animals that appear clinically normal may have a rapid evolution of disease and be found dead.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Humane endpoints are used in all experiments as a criterion for euthanasia. Animals which die would not be expected to demonstrate humane endpoints necessitating euthanasia.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21-R-0114
2. Number 11 of animals used in this study.
Nonhuman
3. Species (common name) Primate of animals used in the study.
4. Explain the procedure producing pain and/or distress.

The animals are maintained on a water restriction regimen. During the restriction period, animals are not given water or other fluids in their cages, and their source of fluid intake is the reward given during the experiments and, if necessary, supplements to a minimal total of 20-35ml/kg/day. On days animals are not working, they are given free access to water. In addition, visual behavior and imaging experiments require that the monkey be maintained in a primate chair.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Signs of dehydration will be relieved by rehydrating the monkey(s) and the monkey(s) will be removed from the primate chair if it/they show signs of discomfort. Although appropriate action would be taken immediately, the animal(s) were placed in category E because both of these situations may occur.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

"Column E Explanations" - 2014 USDA Annual Report

Registration Number: 21-R-0124

Customer ID: # 400

Species: silver-haired bat

Number of Animals: 16

Explanation of procedure(s) producing pain and/or distress: Bats collected from the wild by the investigators (investigators possesses all necessary federal & state permits) are infected with one of three different rabies virus (RABV) strains (after animal quarantine). These studies are designed to understand (a) the susceptibility of bats to RABV strains that are more frequently found in other bat species (thus, addressing if bats can transmit different virus strains as "heterologous hosts"); and (b) the effect of hibernation on RABV maintenance in bats. To address this second scientific aim, the investigator uses an artificial hibernaculum equipped with an internal camera to allow animal viewing 24 hrs/7 days per week. Additionally, an infrared thermometer is employed to measure internal body temperatures of bats in order to monitor general health status.

Bats are intentionally infected with known doses and strains of RABV, and it is recognized that they could become ill after virus inoculation. Due to variable RABV pathogenesis and the individual bat immune response, it is possible that inoculated bats will not develop rabies, as has often been observed in the lab. Regardless of the study being conducted, animals that have been inoculated with RABV will be monitored twice a day, seven days a week. Because early signs of rabies are frequently difficult to verify, it is necessary to closely observe animals during the incubation period where clinical disease is expected 7 to 45 days post inoculation. When clinical signs are first suspected (e.g. slight weight loss, minor behavioral changes), animals are monitored every three hours during the day (8:00, 11:00, 2:00, 5:00), and once during the evening (8-10:00). Bats are euthanized once signs of rabies are more strongly suspected (e.g. lack of appetite, aggression, obsessive grooming, ataxia). In the past year, all animals involved in this study that exhibited symptoms of rabies were euthanized prior to death caused by the disease.

Scientific justification for why pain and/or distress could not be relieved: The researchers are studying a bat's response to an administered virus dose and do not want to confound data from the study by introducing drugs. Analgesics might reduce the symptoms thought to be caused by RABV infection. This would ultimately waste animals if the use of pain alleviating drugs were to bias the study's outcome by inadvertently affecting the animals' response to RABV infection. Allowing the animals' immune system to react to the presence of virus without the influence of any delivered drugs is a key element of the study to understand RABV maintenance in bats.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21 - R - 0173
2. Number 32 total / 21 category E of animals used in this study.
3. Species (common name) Canine of animals used in the study.
4. Explain the procedure producing pain and/or distress.

Young dogs were vaccinated with experimental, commercially available or placebo Bordetella bronchiseptica vaccines and then challenged with live Bordetella bronchiseptica cultures and clinical signs of the illness were allowed to develop.

5. Provide a scientific justification why pain and or distress could not be relieve. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Dogs were allowed to develop the clinical signs of the illness to evaluate the efficacy of experimental vaccines to protect against live *Bordetella bronchiseptica*. The frequency of monitoring and Veterinary involvement (i.e. after normal working hours) increased when clinical signs of pain and/or distress were prolonged and/or severe.

Clinical signs of *Bordetella bronchiseptica* were scored over a 14 day period, and that data statistically analyzed to evaluate vaccine efficacy. Relief of the pain and/or distress during the 14 day period would have altered the data being collected and interfered with the evaluation of these vaccines.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specified section number (e.g., AHPIS, 9 CFR 113.102):

9CFR, Part 103.3

Agency _____ CFR _____

Annual Report Addendum, 9/30/2014, Facility No. 21-R-0209
Category E Explanation-Guinea Pigs

Guinea Pig Sensitization Tests determine the allergenicity of materials. The maximization test and the patch test are required by the FDA Modified ISO 10993-1 matrix for preclinical evaluations of Class II and III medical devices. During the maximization test, an adjuvant and extract are injected intradermally. The adjuvant enhances the immune response and results in lesion formation at the injection site. These lesions, ranging in size from 3mm to 20mm, are not treated due to the possible interference or enhancement of the sensitization response. In order to determine the health status of these animals, daily observations are performed and animal health technical personnel evaluate the sites. Any abnormal findings are reported to the Attending Veterinarian for assessment. The positive controls for the patch test result in mild diffuse eschar formation over a 2cm x 2cm area and minimal to moderate hive formation during the challenge phase. As is the case with the maximization test, any abnormal findings are reported to the Attending Veterinarian for assessment. Over the duration of the reporting period none of the 542 guinea pigs used in these evaluations (defined as Category E) required additional veterinary care for problems related to the lesions.

In order to address pain and distress, the Attending Veterinarian researched analgesics and an appropriate oral medication which would not affect the animals' fluid intake was not available. The nature of the Sensitization Tests negates the use of topical analgesia. We also performed weight trends and the animals exhibited weight gain throughout the test procedures. The animals ambulated normally and only vocalized when handled (as is the case with untreated guinea pigs).

21-R-0021/294

OCT 29 2014

Registration # 21-R-0021 – SUNY Downstate Medical Center
Reporting Period October 1, 2013 - September 30, 2014
Summary of Exemptions

1. The IACUC approved for scientific reasons: controlled water access to be used as a positive reinforcement tool One protocol (10 bonnet macaques).
2. The IACUC approved for scientific reasons or incompatibility: non-social housing Two (2) protocols 34 macaques.
3. The IACUC approved for scientific reasons: extended sanitation intervals of bat housing to preserve the scent and marking stability required to maintain normal gestation periods. One protocol: 61 fruit bats.

SUMMARY OF EXCEPTIONS**October 1, 2013 to September 30, 2014**

1. During the reporting period, the IACUC granted permission to house gerbils and guinea pigs in the same room in the Institute of Comparative Medicine Central Animal facility. The conditions of the space were adjusted to allow for this housing and microisolator tops were kept on each gerbil cage. The number of animals housed as described above during the reporting period was 151 guinea pigs and 51 gerbils.
2. A total of 45 macaques were individually housed during the reporting period based either on scientific necessity as described in IACUC-approved protocols, or on veterinary discretion due to animal incompatibility. The animals were housed to allow for visual and auditory social interaction.
3. During the reporting period, a total of 15 macaques were occasionally given only limited access to water, based on scientific necessity as described in an IACUC-approved protocol. The limitation was initiated during a gradual acclimation period tailored to each animal. Animals were monitored closely (e.g. body weight, hydration, volume of water consumed, behavior) by the investigative and veterinary staff for health and well being.

**Attachment to 2013-14 APHIS FORM 7023, Annual Report of Research Facility,
Nathan Kline Institute for Psychiatric Research, Orangeburg, NY 10962**

Certificate # 21-R-0084 Customer # 448

For the reporting period of 10/01/13 – 09/30/14: With regard to the NKI-IACUC SOP for Social Housing of Primates as well as other regulations and guidelines noted below, the following species and number of animals along with a description of their use are listed:

- a. Five (5) rhesus monkeys (sp. *Macaca mulatta*) were used in controlled water access procedures and were at times single-housed in relation to those procedures as part of IACUC-approved studies.
- b. Two (2) rhesus monkeys were single-housed as a result of social incompatibility.
- c. Two (2) capuchin monkeys (sp. *Cebus apella*) were at times single-housed in relation to procedures specified in an IACUC-approved study.
- d. Two (2) capuchin monkeys were single-housed as a result of social incompatibility.

All other monkeys of both species were either pair-housed or small-colony-housed. The research animals cited in a. and c. above were also socially housed when not in the phase of their protocols that required temporary isolation.

Guidelines and regulations:

I. Animal Welfare Regulations, 2002 9CFR Ch.1. Subpart C. Research Facilities, 2.38 Miscellaneous, (f) Handling (2)(ii) Deprivation of food or water shall not be used to train, work or otherwise handle animals; Provided, however, That the short-term withholding of food or water from animals, when specified in an IACUC-approved activity that includes a description of monitoring procedures is allowed by these regulations.

II. Animal Welfare Regulations, 2002 9CFR Ch.1. Subpart D. Nonhuman Primates, 3.83 Watering. Potable water must be provided in sufficient quantity to every nonhuman primate housed at the facility. If potable water is not continually available to the nonhuman primates, it must be offered to them as often as necessary to ensure their health and wellbeing, but no less than twice daily for at least 1 hour each time, unless otherwise required by the attending veterinarian, or as required by the research proposal approved by the Committee at research facilities.

III. Guide for the Care and Use of Laboratory Animals, Institute of Laboratory Animal Research, Commission on Life Sciences, National Research Council, 8th edition, 2011.

Food and Fluid Regulation, pg 30: Regulation of food or fluid intake may be required for the conduct of some physiological, neuroscience, and behavioral research protocols. The regulation process may entail *scheduled access* to food or fluid sources, so an animal consumes as much as desired at regular intervals, or *restriction*, in which the total volume of food or fluid consumed is strictly monitored and controlled (NRC 2003b). The objective when these studies are being planned and executed should be to use the

Guide for the Care and Use of Laboratory Animals (cont.)

least restriction necessary to achieve the scientific objective while maintaining animal well-being.

The development of animal protocols that involve the use of food or fluid regulation requires the evaluation of three factors: the necessary level of regulation, potential adverse consequences of regulation, and methods for assessing the health and well-being of the animals (NRC 2003b). In addition, the following factors influence the amount of food or fluid restriction that can be safely used in a specific protocol: the species, strain, or stock, gender, and age of the animals; thermoregulatory demand; type of housing; time of feeding, nutritive value, and fiber content of the diet (Heiderstadt et al. 2000; Rowland 2007); and prior experimental manipulation. The degree of food or fluid restriction necessary for consistent behavioral performance is influenced by the difficulty of the task, the individual animal, the motivation required of the animal, and the effectiveness of animal training for a specific protocol-related task.

The animals should be closely monitored to ensure that food and fluid intake meets their nutritional needs (Toth and Gardiner 2000). Body weights should be recorded at least weekly and more often for animals requiring greater restrictions (NRC 2003b). Written records should be maintained for each animal to document daily food and fluid consumption, hydration status, and any behavioral and clinical changes used as criteria for temporary or permanent removal of an animal from a protocol (Morton 2000; NRC 2003b). In the case of conditioned-response research protocols, use of a highly preferred food or fluid as positive reinforcement, instead of restriction, is recommended. Caloric restriction, as a husbandry technique and means of weight control.

IV. Guidelines for the care and use of mammals in neuroscience and behavioral research / Committee on Guidelines for the Use of Animals in Neuroscience and Behavioral Research. National Academy of Sciences. 2003.

FOOD AND FLUID REGULATION: Neuroscience-related protocols occasionally require the regulation of animals' food or fluid intake to achieve a specific experimental goal. The regulation process may entail *scheduling* of access to food or fluid sources so an animal consumes as much as desired at regular intervals, or *restriction*, in which the total volume of food or fluid consumed is strictly monitored and controlled. As stated in the *Guide*, "the least restriction that will achieve the scientific objective should be used" (p. 12). Regulation of food or fluid is commonly used as motivation in experiments that require animals to perform a behavioral task with a high degree of repeatability (Toth and Gardiner, 2000), but the food or fluid consumption is not the experimental variable. In those studies, food and fluid regulation is used to motivate the animals to perform a specific behavioral task for a food or fluid reward; regulation of food or fluid outside the experimental session ensures response reliability to the food and fluid reward in each session (NIH, 2002). That allows the investigator to elicit and monitor the same movement repeatedly, to present the sensory stimuli under highly controlled conditions, and to obtain physiologic discriminations from the animal. For example, water-regulated monkeys may be trained to press a button for a juice reward, while the investigator measures the effect on neuronal firing rates. In conditioned-response experiments, (for example, a monkey may be conditioned to associate a light with a fluid reward), consideration should be given to whether the use of highly preferred food or fluid as positive reinforcement can be used instead of restriction. Fluid reward is preferable to food reward in some types of experiments. For example, studies that monitor neuronal activity in the brain may require the minimization of jaw or head movement to avoid

NAS Guidelines for the care and use of mammals in neuroscience and behavioral research (cont.)

displacing a microelectrode from its position. Because fluid rewards can be delivered through a tube positioned near the animal's mouth and tongue, they offer a particular advantage: licking and swallowing a fluid reward are much less disruptive to the neuronal recordings than chewing or crunching movements of the teeth or jaws that accompany the consumption of food rewards (NIH, 2002). Fluids offer additional experimental advantages. They can be easily delivered in small quantities, maximizing the number of trials that can be executed before satiation of the animal. In contrast with food rewards that require chewing before swallowing, fluids are quickly consumed, reducing the inter trial interval an important advantage when an animal must perform a behavior hundreds or even thousands of times in an experimental session to allow for statistical analysis.

Determination of Minimum Fluid Consumption

Assessing the ad libitum fluid consumption for each fluid-regulated experimental animal might be an important step in ensuring the health and well-being of the animal. However, voluntary fluid-consumption levels in a laboratory setting might not be equivalent to the animal's minimal fluid-requirement levels. Limited availability of fluid is a common determinant of consumption in natural settings, and physiologic and behavioral mechanisms have evolved to enable animals to adapt to the limitation. For example, rats and monkeys quickly learn to consume much, if not all, of their daily fluid needs in a short, restricted period (reviewed by Evans, 1990). Species that drink from watering sites only once per day invoke homeostatic mechanisms to control urine output in relation to their hydration state (Toth and Gardiner, 2000). Mammals may also use torpor to adapt to the dry season in their natural habitat (Schmid and Speakman, 2000). Thus, it is difficult to designate specific minimum fluid needs, because requirements may vary with species, strain, environment, efficiency of fluid-saving mechanisms, and so on. IACUCs, veterinarians, and researchers should take into account the possibility that laboratory animals can be adequately physiologically sustained with less fluid than they would voluntarily consume.

At the start of a new research protocol involving restricted or altered access to fluid, the amount of fluid consumed, body weight, and a hydration assessment should be recorded daily for each animal, as individual animals may manifest physiologic and behavior differences. Those data will help in refining the protocol and evaluating the adequacy of access to fluid. In evaluating the adequacy of access to fluid, each animal should be evaluated individually to determine how it is adapting to the imposition of restricted or altered access. For example, if an animal attains and then maintains a new body weight, it could suggest successful adaptation even if the new weight is below the weight recorded during ad libitum access to fluid.

Fluid-Regulation Design

When fluid regulation is selected as a behavioral motivator, access to fluid outside the experimental setting has to be regulated to motivate performance of the rewarded behavior (NIH, 2002). Generally, fluid regulation is patterned after one of two designs. In "fluid restriction," animals are given access to a metered volume of fluid per day and may consume that volume over any length of time. In "fluid scheduling," the experimenter determines the time of day during which the animal has access to fluid, but the duration of drinking and the volume consumed are determined by the behavior of the animal. For example, in many behavioral protocols, animals are given continual access to fluid for as

NAS Guidelines for the care and use of mammals in neuroscience and behavioral research (cont.)

long as they continue to perform a task. Because food and fluid generally are not freely available in the wild and some effort (foraging) is required to obtain them (NIH, 2002), such scheduling designs may model the effort expenditure necessary to obtain food and fluid in the wild. For both types of fluid regulation, animals generally should be given free access to fluid for some period on days when experimental sessions are not scheduled, unless scientifically justifiable reasons preclude such fluid supplementation (NIH, 2002).

When developing a restriction design to motivate an animal to perform a task, the main consideration is determining what level of restriction is necessary to achieve the desired performance. Generally, the more complicated the task, the more stringent the restriction protocol needs to be. For example, in a study of water-restricted rats, where the rats were required to bar press to obtain their daily allotment of water (Collier and Levitsky, 1967), mild restriction (rats receive 75% of their average ad libitum intake) resulted in poor performance while a more stringent restriction (rats receive 32% of their average ad libitum intake) resulted in maximal performance. This is why fluid restriction levels used in one study may not provide adequate motivation for learning or performing other more demanding tasks (Toth and Gardiner, 2000). However, the most severe restriction is not always necessary for achieving maximal performance. In this same study (Collier and Levitsky, 1967), bar-press rates were similar when water was restricted to 32%, 42%, or 56% of average ad libitum intake.

Species- and Strain-Specific Considerations

Other Influences on Fluid Homeostasis In some situations, fluid reinforcers (such as fruit juice) are used because they may maintain behavioral performance when access to fluid is restricted; for example, some monkeys prefer fruit juice when performing long behavioral sessions in which many reinforcements are delivered (NIH, 2002). Investigators, veterinary personnel, and IACUCs should consider and monitor for any potential physiologic ramifications of total substitution of solute-containing fluids for water in a fluid-restricted protocol. Sweetened milk or juices may be unfavorable choices for use in a long-term study in which an animal will participate for many months or years, because of the potential for dental caries (NIH, 2002). Provision of treats, such as fruits or vegetables, is recommended when appropriate to provide variety and nutritional balance to an experimental animal's diet (NRC, 1996). The water content of these dietary supplements can be difficult to estimate, so their potential contribution to hydration should not be considered in determining the minimal ration of fluids to be given to the animal (see Pennington et al., 1998, for data on water content of fruit and vegetable supplements). However, investigators, veterinary personnel, and caretakers should be aware of the potential need for restriction or substitution of supplemental food items in fluid-regulated animals.

NKI IACUC SOP SOCIAL HOUSING OF PRIMATES update 11/6/12.

The default husbandry environment for primates at NKI is paired or group housing. However there are specific cases when primates need to be single housed. The following are examples of such cases:

1. During training when water consumption required to maintain health is quantified and during testing when a specific amount is allocated for a specific individual.
2. During post-operative and post-procedure periods or for veterinary care when the presence of another individual(s) may impair recovery or health and well being.

NAS Guidelines for the care and use of mammals in neuroscience and behavioral research (cont.)

3. Individuals found to be incompatible or aggressive toward other individuals such that injuries may result from co-habitation and this may result in the necessity of removing animals from an ongoing study undermining the integrity of the study.

4. Placement of opposite sexes in co-habitation that may result in pregnancy and necessitate the removal of animals from an ongoing study undermining the integrity of the study.

5. During the course of the study for administration of experimental substances, sampling, or observations that are required to acquire necessary experimental data.

December 3, 2014

Dear Dr. Goldentyer:

NYULMC, DLAR wishes to amend the IACUC approval exception to AWR summary as follows.

IACUC Approval Exception to AWR Summary:

The IACUC approved one protocol during this period that involved water scheduling for nonhuman primates. This exception affects one *Macaca mulatta*.

The justification for the exception is as follows:

This IACUC protocol employs standard methods used to study sensory and motor function in animals performing behavioral tasks and conforms to the guidelines set forth in the 2010 National Research Council publication *Guide for the Care and Use of Laboratory Animals* (pg. 32-33) and Van Sluyter RC et al (2003) *Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research*. Washington, DC; National Academy Press, [pg. 209].

Sincerely,

(b) (6), (b) (7)(C)

November 24, 2014

Summary of IACUC Approved Exceptions to USDA Standards and Regulations

Exception to Section 3.83 Watering:

Training of animals to perform specific behavioral tasks is critical to achieve the goals of many research projects. The motivation for animals to perform such tasks is accomplished through scheduling access to water as a reinforcer. Based on the experience of researchers, water scheduling is the best reinforcement method to ensure animals will maintain healthy while completing their research tasks.

42 macaques exempt from watering requirement because they could not be offered water twice daily for at least one hour each time.

Exception to Section 3.81 Environmental Enhancement to Promote Psychological Well-Being:

8 macaques exempt from social housing due to research constraints (i.e. potential injury from cage mate could adversely impact research).

Exception to Section 3.8 Primary Enclosure:

6 macaques exempt from primary enclosure minimum floor space requirement in order to accommodate trio grouping. This innovative housing arrangement, although not meeting the specification for floor space, DOES provide increased height, volume and cage complexity permitting opportunity for nonhuman primates to express species-typical behavior.

2 macaques exempt from primary enclosure minimum floor space requirement so that they may continue to be housed together. These monkeys have been pair housed for a long time, but one is a little overweight. This innovative housing arrangement, although not meeting the specification for floor space, DOES provide increased height, volume and cage complexity permitting opportunity for nonhuman pirates to express specific-typical behavior.

Weill Cornell Medical College
"Reportable IACUC-Approved Exceptions"

1. Restriction of water in 11 nonhuman primates (macaques) for behavioral training approved in 3 protocols.
2. Potential for unalleviated pain/sudden death in 4 rabbits in a protocol in which *Exserohilum rostratum* is inoculated and may cause acute meningitis.
3. Potential for unalleviated pain/sudden death in 6 rabbits in a protocol modeling disseminated candidiasis.
4. Potential for unalleviated pain/sudden death in 3 hamsters in a protocol modeling visceral leishmaniasis.
5. Caging exemption approved for group housing of two trios of nonhuman primates (African green) during quarantine (Dec 2013 through March 2014) used on a single protocol.
6. Exception to social housing of 2 nonhuman primates (macaques) with intracerebral implants maintained on a single protocol.

OCT 28 2014

Summary of Exceptions to the Standards and Regulations of the AWA Annual Report of Research Facility 2014

Albert Einstein College of Medicine of Yeshiva University

Registration No. 21-R-0132

Customer No. 394

394

The following exceptions to the standards and regulations of the AWA are specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions follows and is hereby amended to the annual report.

I. Exception to: CFR; Title 9, Volume 1; 9CFR, 3.81

Sec. 3.81 Environment enhancement to promote psychological well-being. (a) *Social grouping. The environment enhancement plan must include specific provisions to address the social needs of nonhuman primates of species known to exist in social groups in nature. Such specific provisions must be in accordance with currently accepted professional standards, as cited in appropriate professional journals or reference guides, and as directed by the attending veterinarian.* (2) *For a research facility, the Committee may exempt an individual nonhuman primate from participation in some or all of the otherwise required environment enhancement plans for scientific reasons set forth in the research proposal. The basis of the exemption shall be documented in the approved proposal and must be reviewed at appropriate intervals as determined by the Committee, but not less than annually.*

The IACUC has exempted male nonhuman primates on IACUC-approved protocols from group / pair housing for scientific and safety reasons. The issue of group / pair housing male primates was discussed at length by our IACUC and deemed to present too many risks to the animals and handlers as well as to the scientific research. This issue is discussed annually by the IACUC during review of the Environmental Enrichment Program and during protocol review. In general, co-housing of male primates is not advised due to dominance interactions. Fighting, aggressive grooming, and aggressive sexual behavior could lead to severe injury. The risk is especially high following cranial surgery when one monkey has a head implant that can become infected or become loosened by an overly attentive cage mate. Even under close human supervision, the possible need for human intervention to stop potentially injurious behaviors by the animals incurs unacceptable health and safety risks to the human. A minimum of two non-human primates are housed in the animal rooms at all times. These nonhuman primates are maintained within visual and audio contact of each other and receive environmental enhancement according to the IACUC-approved Non-Human Primate Environmental Enrichment program.

Species: *Macaca fascicularis*

Number in this reporting year: 10

II. Exception to: CFR; Title 9, Volume 1; 9CFR, 3.83

Sec. 3.83 Watering. *If potable water is not continually available to the nonhuman primates, it must be offered to them as often as necessary to ensure their health and well-being, but no less than twice daily for at least 1 hour each time, unless otherwise required by the attending veterinarian, or as required by the research proposal approved by the Committee at research facilities.*

The IACUC has approved exceptions for nonhuman primates on protocols in which water restriction is used as a means of positive-reward conditioning. Behavioral training is accomplished by operant conditioning techniques using water / juice as positive rewards. Therefore, non-human primates are maintained on controlled water intake schedules to achieve good behavioral performance. Water is provided *ad lib* on days when no recording sessions are scheduled. In the evening prior to the behavior training / recording day water is removed over night. The day of training / recording the non-human primate's water intake is provided during a 4-6 hour recording session as reward and the total amount is recorded. After the session water is provided either *ad lib*, when no training is scheduled the next day, or *ad lib* for at least two hours in the evening before the next day's training session. Body weights are tracked and recorded routinely to ensure that baseline body weight is maintained or expected weight gain is as anticipated (for younger primates). Food intake and health of the nonhuman primates is monitored by the veterinary and animal care staff.

Species: *Macaca fascicularis*

Number in this reporting year: 8
